Mid-Term Review

IT Project Management (INS3044)

Learning Objectives

- Synthesize project life cycle.
- Integrate core management concepts.

- Apply critical path methods.

- Evaluate project cost impacts.
- Assess project quality standards.

- Analyze and mitigate risks.

Conception & Definition

- Define project scope clearly.
- Identify core deliverables early.
- Manage the Iron Triangle.
- Balance scope, time, cost.
- Ensure quality remains central.
- Control scope creep strictly.

Practice: Iron Triangle

Project Memo

- Scenario: UI designer leaves.
- Deadline remains Week 8.
- **How to manage scope?**
- **How to manage cost?**
- **Draft sponsor update email.**

Schedule Planning

- Break down work effectively.
- Sequence tasks very logically.
- Draw AON network diagrams.
- Identify the critical path.
- Find schedule bottleneck risks.
- Optimize resource allocation plans.

Practice: Critical Path

- Review AON diagram rules.
- Map tasks A through G.
- Find the longest path.
- Calculate total development days.
- Identify critical path bottlenecks.

Cost Estimating

- Estimate project costs accurately.
- Establish solid baseline budgets.
- Track expenses during execution.
- Monitor variance limits closely.
- Prepare financial project closeout.

Practice: Financial Closeout

- Update definition of done.
- Ensure project closes correctly.
- List two financial items.
- Check budget against actuals.
- Finalize all vendor payments.

A clipboard with a silver clip at the top and a yellow border. It contains a checklist titled "Definition of Done". The checklist has five items, each with a checkbox and a line of text. The first three items are checked with green checkmarks, and the last two are unchecked.

Definition of Done	
☒	All project deliverables completed and accepted.
☒	Project budget reconciled with actual costs.
☒	Final invoice sent to client.
☐	
☐	

Quality Management

	Good Quality	Poor Quality
Before Delivery	Prevention	Internal Failure
After Delivery	Appraisal	External Failure

- Define quality standards clearly.
- Invest in error prevention.
- Appraise and inspect work.
- Minimize internal failure costs.
- Avoid external failure disasters.
- Satisfy core customer requirements.

Practice: Cost of Quality

- Identify error prevention costs.
- Identify work appraisal costs.
- Define internal failure costs.
- Define external failure costs.
- Update quality done checklist.

Risk Management

- Identify potential project risks.
- Assess probability and impact.
- Plan risk response strategies.
- Allocate budget schedule reserves.
- Monitor project risks continuously.
- Update risk issue logs.

Practice: Risk Response

- Name one project risk.
- Assess impact and probability.
- Determine risk response strategy.
- Assign a risk owner.
- Establish contingency action plans.

RISK CARD

Risk Name: _____

Impact Level: _____

Mitigation Strategy: _____

Owner: _____

Project Integration

- Integration is absolutely critical.
- Planning prevents poor performance.
- Variables impact one another.
- Monitor execution very closely.
- Review milestones continuously.
- Closeout ensures final success.

Key Takeaways & Review

Key Takeaways

- ✓ Master the Iron Triangle.
- ✓ Control critical path tasks.
- ✓ Balance cost, quality, risk.

1

Q1: Resolve scope creep?

2

Q2: Compress project schedule?

3

Q3: Mitigate sudden risks?
